

AKASH S

Product Designer (UI/UX)

+91-9360480875 | akash.ivii02@gmail.com | [Portfolio](#) | [LinkedIn](#) | Tamil Nadu, India

PROFESSIONAL SUMMARY

Entry-level Product Designer who has **independently owned end-to-end design across two startups** — shipping a **2-app mobile ecosystem from zero to developer handoff in under 2 months**, and single-handedly redesigning the **Product, Inventory, and Procurement modules** of a live ERP system. Comfortable **owning ambiguity directly with founders**, turning complex operational logic into simple, scalable UI systems without a design team behind me.

PROFESSIONAL EXPERIENCE

Product Design Intern | Modulus Sell

June 2026

Remote

- Owned end-to-end redesign of the Product Management, Inventory, and Procurement modules of a live ERP system as the **sole designer**, working directly with the founder from problem discovery to final handoff.
- Restructured a fragmented, high-friction product creation form into **5 modular sections** (Basic Info, Pricing & Tax, Stock & Unit, Specifications, Variant Management), cutting form complexity and reducing user cognitive load.
- Architected a variant management system (attribute creation, auto-generated combinations, variant-level pricing/stock/barcode/image, bulk editing) that resolved **6 distinct real-world edge cases** including multi-vendor and shared-batch scenarios.
- Designed a batch-based inventory engine supporting multi-vendor and multi-batch tracking across **6 product/purchase combinations**, eliminating manual reconciliation for procurement teams.
- Redesigned the Purchase Order flow to auto-generate pre-filled, partially-locked POs directly from product creation, removing duplicate manual data entry across **6 vendor/batch/variant scenarios**.
- Built a quantity-based dynamic pricing engine with live price preview and auto-generated helper text, enabling businesses to configure custom tiered pricing (e.g., 1–4kg, 5–9kg, 10kg+) **without engineering support**.
- Benchmarked **5+ competitor ERP platforms** across inventory, procurement, and barcode workflows, applying findings to cut unnecessary user interactions across the redesigned system.

Product Design Intern | Inquisyx Innovations Pvt. Ltd.

Dec 2025 – Feb 2026

Remote

- Shipped end-to-end UI/UX for **2 production mobile apps** (Customer + Partner) under one unified product vision as the sole designer on the team.
- Replaced a fragmented legacy UI with a **single design system**, eliminating visual inconsistencies across both apps and cutting developer clarification questions to **near zero**.
- Delivered developer-ready, high-fidelity Figma files using auto layout and component variants, removing back-and-forth design iterations from a daily agile sprint cycle.
- Worked directly with the Founder and Lead Developer, compressing a feedback loop typically requiring a 3–4 person team down to a **lean 2-person review cycle**.

INDEPENDENT PROJECTS

Spendly — Personal Finance Management App

- Designed a mobile finance app end-to-end — user flows, IA, high-fidelity UI, and interactive prototypes — for expense tracking, financial insights, and savings goals aimed at young professionals.

SYNTRA — AI-Assisted Expert Collaboration Platform

- Designed a full SaaS experience connecting users to verified experts via AI-powered matchmaking, dashboards, threaded discussions, and live booking workflows.

SKILLS

Tools: Figma (Primary), Framer, Adobe Photoshop

UX Practice: Interaction Design, User Research, Usability Testing, Wireframing, Prototyping, Edge Case Analysis

Systems & Process: Design Systems, Information Architecture, Auto Layout, Dev Handoff, Design Thinking, Agile Sprints, Founder Collaboration

EDUCATION

B.E. Electrical and Electronics Engineering

2021 – 2025

Karpagam Institute of Technology, Coimbatore, TN

CERTIFICATIONS

- Google UX Design Certificate — Google, Coursera
- UI/UX Design Specialization — CalArts, Coursera
